SPRINKLING SYSTEMS

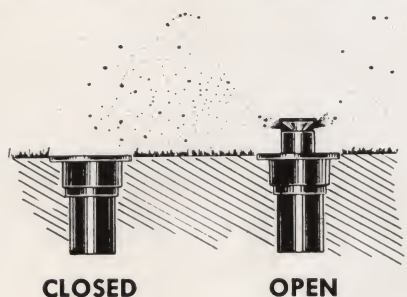

SPRINKLER SYSTEMS TO MAINTAIN THE BEAUTY OF YOUR HOME OR OFFICE SURROUNDINGS

● For lawns of the loveliest green—and flowers and shrubs of rare magnificence—you need scientific irrigation by the Miller Method.

Miller Underground Sprinkling System brings the gentle invigoration of "spring showers" to your lawn and garden—every day of the outdoor season. A remarkably fine, mist-like spray is evenly distributed over the entire area to be irrigated. There are no streams to wash the dirt from the tender roots, or to form unsightly puddles. Miller systems are entirely practical, and economical, for the grounds surrounding the modest small home—their usefulness is by no means limited to larger homes and estates. The Miller "Pop-Up" Sprayer is perfectly designed to be out of sight and level with the lawn when not in operation—there is not the slightest interference with mowing or rolling of the lawn. When in use, the force of the water pushes up the sprayer heads, providing a mist-like spray of unusual fineness.

Automatic drains do away with the danger of broken pipe-lines during the cold months. . . . Miller experts install the Miller System quickly and without the slightest damage to lawn, flowers or shrubs. Grounds are left in perfect condition with no surface traces of the installation. The Miller System, once installed, is permanent and trouble-free. Pipes are of copper, sprayer heads of brass, valves are designed for trouble-free operation.

Why not call in a Miller Engineer to suggest how you can beautify your home surroundings at nominal cost? Mail the convenient card enclosed for further information without the slightest obligation.

LARGE COVERAGE IRRIGATION FOR INDUSTRIAL PLANTS, INSTITUTIONS, LARGE RESIDENTIAL PROPERTIES

● These and many more throughout the country have long found economy in the use of Buckner systems. They save as much as 50% in water consumption, eliminate labor and in many instances cost no more than the hose systems that are desired for complete coverage.

Buckner sprinkling systems have been irrigating the turfs of America for over 35 years. Their slow, even application of the water, simulating a gentle rain, permits the ground to absorb it thoroughly without waste. Their large coverage and wide variety of pattern design make them unequalled for performance and low initial cost as well as low operating cost.

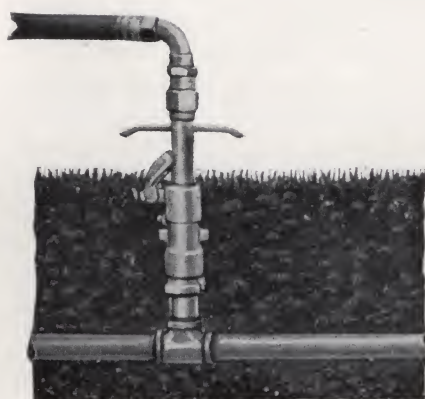

Buckner Rotary Pop-Up Sprinklers

For use in the installation of permanent underground systems

Miller offers Buckner large coverage irrigation in two types:

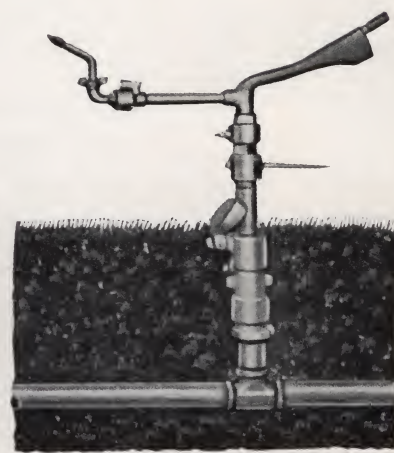

- (1) Concealed "Pop-up" system in which even the sprayers are underground.
- (2) Quick-coupling system—the most economical of all underground irrigation methods.

Hose connections are made quickly and easily, in the Buckner Quick-coupling system, illustrated above.

Buckner Quick-coupling valves are hidden in the turf and present no obstruction to mowers.

The convenience and efficiency of hoseless sprinklers on Buckner quick-coupling valves is unexcelled.

MILLER SPRINKLING SYSTEMS offer—

BALANCED DESIGN using the most efficient equipment for your conditions.
MANUALLY CONTROLLED SYSTEMS.

AUTOMATICALLY CONTROLLED SYSTEMS with individual On-Off-Automatic selector switch for each section.
Daily Selector Wheel—Master Rain Switch—Automatic Pump Control.

BOOSTER PUMPS for low pressure areas, turned On and Off Automatically.
EIGHTY TYPES and SIZES of IRRIGATION EQUIPMENT—From 16 feet diameter of throw to 375 feet diameter of throw.

PUMPS and PUMPING PLANTS where Lake or Stream water is available.
Operation may be Automatic or Manual.
CHOICE of Buckner or Miller Irrigation Equipment.

SERVICE ORGANIZATION completely equipped to handle service work efficiently and promptly.
COMPLETE PLAN and SPECIFICATION SERVICE for Architects, Engineers and builders.

MILLER SYSTEMS are designed by Engineers. There is no "Standard" design or single piece of equipment acceptable for all watering conditions.

Why not talk to a MILLER Engineer. He will prepare a plan and quotation for the installation of a MILLER SYSTEM on your property.
There is not the slightest obligation on your part.
